a The owner was fixed from the analysis arrays

Analysis arrays

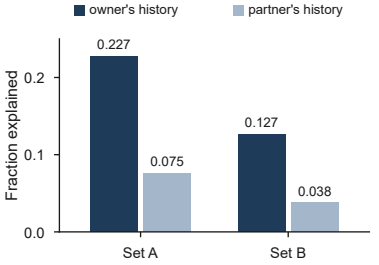
15 arrays: each array's owner and every molecule's history are fixed here

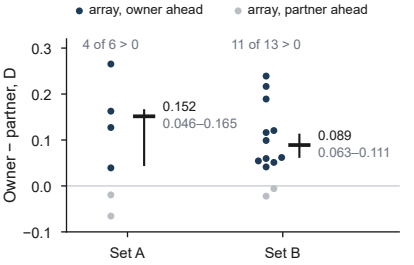
Set A: 309 reserve pairs
6 arrays, ≥90% of each condition library

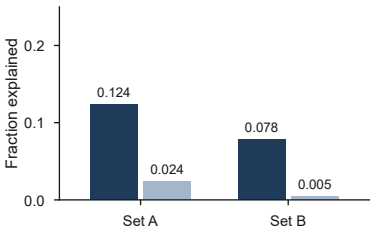
Set B: 535 pairs
13 arrays, same libraries, outside the dense arrays

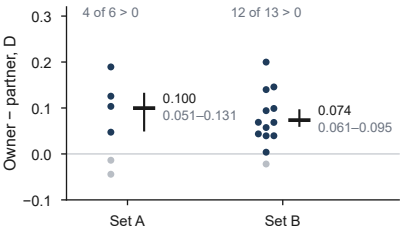
Together 844 pairs outside the analysed arrays in 14 reaction systems

b The owner's history predicts out-of-array pairs better





c The advantage remains with two partners on each side




Matched-depth sensitivity; two partners per side
